

Adobe Illustrator Master Course

A closer look at what you will learn:

- We will start with the basics, so you feel totally at ease with the interface, preferences, setting up new documents. We will also cover fundamental principles like the difference between vector and pixel graphics.
- Next classes will teach you everything you need to know about working with objects in Illustrator. These are the building blocks of all vector graphics so these initial lessons will help you to understand and work with more complex tools later on.
- Next up, in the drawing section of the course, master drawing modes, the Pen tool, and all the different ways you can draw and manipulate paths.
- Next learn about the different types of Brushes and how to make the most of their unique features. You will also learn how to create your own custom brushes.
- In the next chapters you will learn about tracing photographs with a powerful feature called Image Trace and everything you need to know about adding type to your illustrations.
- Once you are comfortable with all of that you can move onto the Advanced Techniques section, which will introduce more complex features like Symbols, Graphs, Gradient Meshes, Perspective Drawing, Recolor Artwork and workflows like Masking.
- Finally, discover how to correctly export your work for print and screen, and ways to share and archive your projects
